TidyNotes

Everything you have ever written down, kept and put to work.

Write on your tablet or on paper the way you always have. TidyNotes collects every page, reads your handwriting, and turns it into your to-dos, your summaries and the answers you need.

What TidyNotes does for you

Your to-do list writes itself

Every to-do in every notebook lands in one list, linked to the page it came from. Cross it out on the page and it comes off the list.

Ask your notes anything

Ask what you promised, decided or learned, and see the answer beside your own handwriting.

Summaries and lessons

A week, a month or a year of notes summed up, and the lessons you keep writing down gathered in one place.

Every page, every version, for good

Each page is kept forever. Add to an old page and TidyNotes records what you added and when.

Your notebooks on your phone and computer

Flip through any notebook from anywhere, with the read text alongside the page.

Yours, and right

Fix a misread word once and it stays fixed. Your notes are never used to train AI.

Works with however you take notes

Boox · reMarkable · Supernote · Kindle Scribe · Kobo · Photos of paper notes · Whiteboards and sticky notes · iPad notebooks · PDFs and documents · Typed notes

What other note tools leave out

- **All of your notes at once**
  Most tools summarise one notebook at a time. TidyNotes works across everything you have written, on every device.
- **To-dos that stay open until they are done**
  Tablet makers turn a single note into a reminder. TidyNotes keeps one running list across every notebook.
- **Your handwriting as the source**
  Every answer, to-do and summary points back to the page it came from.
- **One home for every notebook you own**
  Your tablet, your paper and your documents in one place, instead of inside each maker's app.

Keep writing. TidyNotes does the rest.

Free to start, with plans for everyone who writes a lot.
